The Complete Directory and Technical Architecture of Truly Free Forever Subdomains

Securing a permanent, zero-cost web address in 2026 requires navigating an ecosystem of **over 250 active domain suffixes across seven distinct infrastructure categories**, ranging from edge cloud platforms (*.pages.dev, *.vercel.app, *.netlify.app, *.github.io) and traditional LAMP hosts (*.rf.gd, *.22web.org, *.serv00.net) to open-source GitOps registries (*.is-a.dev, *.thedev.id, *.js.org) and full nameserver-delegated pseudo-top-level domains (*.dpdns.org, *.us.kg, *.eu.org, *.pp.ua)[1]. While every permanent provider cataloged in this report offers a "free forever" tier—meaning there is no mandatory trial expiration or credit card paywall required to keep the address resolving—the underlying DNS control, SSL certificate isolation, and hosting portability vary drastically depending on how the parent domain is architected[6].

At the highest level of technical autonomy are **delegation-only registries** (such as DigitalPlat FreeDomain, EU.org, NIC.UA, and Public Free Suffix), which register their suffixes on the Mozilla Public Suffix List (PSL) and allow you to point custom nameservers (NS records) directly to Cloudflare, deSEC, or self-hosted DNS infrastructure[9]. Directly below them are **GitOps developer registries** (such as is-a.dev, thedev.id, and Open Domains), where submitting a pull request to a public GitHub repository provisions CNAME, A, AAAA, or TXT records that map your vanity subdomain to Vercel, Netlify, or GitHub Pages[14]. Conversely, **walled-garden hosting subdomains**—such as the 25+ advertised extensions provided by InfinityFree (*.rf.gd, *.epizy.com, *.free.nf) and the 24+ extensions from Byet.host (*.10001mb.com, *.22web.org)—lock DNS resolution strictly to the provider's internal shared servers, prohibiting external A record modifications, external CDNs like Cloudflare, or third-party hosting on GitHub Pages[3].

Furthermore, developers and system administrators must account for three operational realities in the 2026 landscape. First, **several prominent historical providers have permanently shut down**, including Freenom (.tk, .ml, .ga, .cf, .gq), 000webhost (*.000webhostapp.com, discontinued in 2024), Hostinger Free (discontinued in 2024), and Glitch (*.glitch.me, which terminated app hosting on July 8, 2025, leaving only legacy redirects active through the end of 2026)[4]. Second, **Public Suffix List (PSL) status dictates platform compatibility**: if a free subdomain's parent suffix is not registered on the PSL (for example, cloudns.com), platforms like Cloudflare and Vercel treat it as a nested subdomain rather than a registrable root domain, blocking standard zone onboarding and triggering cross-account ownership verification errors[10]. Third, **"free forever" frequently entails activity or traffic enforcement**, such as No-IP's 30-day email confirmation rule, WebHostMost's 45-day login requirement, FreeWebHostingArea's mandate of at least one visitor per month, or InfinityFree's 50,000 daily hit ceiling reported by industry reviewers[18].

Free Forever Subdomains Divide Into Seven Architectural Tiers Based on DNS Autonomy

250+
Total Active Suffixes
Cataloged across 7 distinct technical architectures in 2026

35+
InfinityFree & ByetHost
25+ InfinityFree extensions (+11 in 2026) & 24 ByetHost SLDs

60+
GitOps & Dev Registries
Community PR & CLI-claimed domains with external DNS routing

23,000+
Shared DDNS Domains
Community pool on FreeDNS (afraid.org) plus DuckDNS & deSEC

Capability Matrix: Comparing DNS authority, Public Suffix List (PSL) isolation, and host portability

■ Full NS / DNS Delegation ■ Custom CNAME / A Records ■ Locked to Platform

ARCHITECTURAL TIER & PROVIDERS	FLAGSHIP DOMAIN FORMATS	DNS CONTROL & PSL STATUS	PORTABILITY & RETENTION
TIER 1 **PSL Pseudo-TLDs & Delegated Registries** EU.org, DigitalPlat, PublicZone, Open Host, DNSHE, Public Free Suffix	`*.eu.org` `*.us.kg` `*.dpdns.org` `*.qzz.io` `*.nyc.mn` `*.prvcy.page` `*.16-b.it` `*.us.ci` 500K+ domains on DigitalPlat; EU.org running since 1996	Full NS Delegation Mozilla PSL listed (isolated cookies/SSL)	100% Portable (Any Host) Free forever; manual 180–365d renewal on US.KG / DNSHE
TIER 2 **GitOps PR & CLI Developer Registries** is-a.dev, js.org, Open Domains, TheDev, foo.ng, ing.ng, AgentDomains	`*.is-a.dev` `*.js.org` `*.thedev.id` `*.is-cool.dev` `*.cli.rs` `*.ing.ng` `*.makes.fyi` `*.fluxcast.dev` Claimed via GitHub Pull Request or npx CLI / MCP server	A / CNAME / TXT / NS Partial PSL (is-a.dev listed; others shared)	Portable (GH Pages / Vercel) Permanent while active repo/site remains live
TIER 3 **Dynamic DNS (DDNS) & Anycast Networks** FreeDNS (afraid.org), deSEC, DuckDNS, No-IP, Dynu, FreeMyIP	`*.dedyn.io` `*.duckdns.org` `*.mooo.com` `*.freemyip.com` `*.ddns.net` `*.hopto.org` `*.dynu.net` Includes 23,000+ shared domains in afraid.org registry	A / AAAA / TXT / DNSSEC dedyn.io & duckdns.org on PSL	Portable (Self-Host / Any IP) No expiry on DuckDNS/FreeMyIP; 30d login on No-IP
TIER 4 **Cloud PaaS, Jamstack & Static Hosts** Cloudflare Pages/Workers, Vercel, Netlify, GitHub, GitLab, Render, Fly.io	`*.pages.dev` `*.workers.dev` `*.vercel.app` `*.netlify.app` `*.github.io` `*.gitlab.io` `*.onrender.com` `*.web.app` Auto-provisioned per project deployment or git branch	None (Platform Managed) Listed on Mozilla PSL	Locked to Cloud Platform Permanent while account & deployment adhere to ToS
TIER 5 **Free Shared LAMP & cPanel/VistaPanel Hosts** InfinityFree (iFastNet), ByetHost, GoogieHost, Serv00	`*.rf.gd` `*.infinityfreeapp.com` `*.free.nf` `*.wuaze.com` `*.freedev.app` `*.gamer.free` `*.22web.org` `*.whf.bz` External hosting blocked (e.g., cannot route *.rf.gd to GitHub Pages)	Internal CNAME / MX Only Not on PSL (Shared parent SLD)	Locked to LAMP Host No time expiry; subject to account traffic/activity rules
TIER 6 **No-Code CMS, Blogs & Site Builders** WordPress.com, Wix, Blogger, Weebly, Webflow, Carrd, Framer, Canva	`*.wordpress.com` `*.blogspot.com` `*.wixsite.com/site` `*.weebly.com` `*.webflow.io` `*.carrd.co` `*.canva.site` Wix uses path-based routing; custom domains require paid tier	None (Closed Builder) Major builders on PSL	Locked to Proprietary CMS Free forever with platform branding/ads
TIER 7 **Reverse Tunnels & Localhost Ingress** ngrok, Cloudflare Quick Tunnels, Tailscale Funnel, LocalCan, localtunnel	`*.ngrok-free.app` `*.trycloudflare.com` `*.ts.net` `*.loca.lt` `*.trylocalcan.com` Exposes local ports/tailnets; ngrok & loca.lt show visitor interstitials	None (Tunnel Ingress) ts.net & ngrok-free.app on PSL	Tied to Local Daemon Static dev domain (ngrok/ts.net) or ephemeral session URL

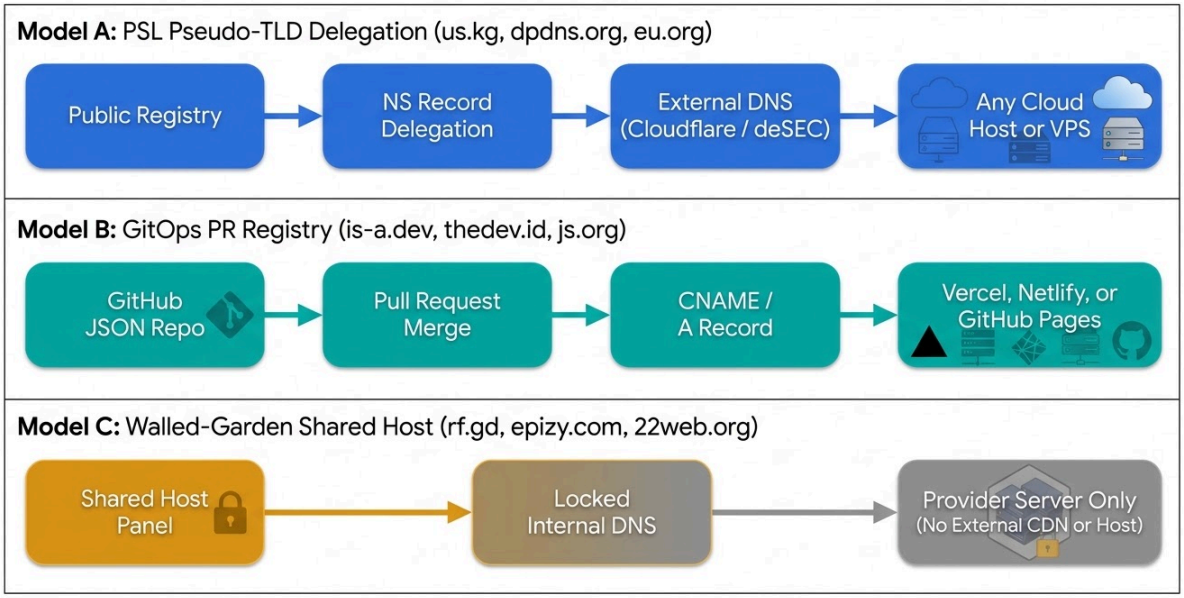

Architectural comparison of the seven free-forever subdomain models active in 2026. Only **PSL-listed pseudo-TLDs** and **GitOps developer registries** allow portable routing across external hosts like Vercel, Netlify, and Cloudflare.

1. Architectural Mechanics: DNS Delegation, PSL Status, and Hosting Lock-In

Before selecting a free subdomain format, you must evaluate where the domain sits in the Domain Name System (DNS) hierarchy and whether it is listed on the **Mozilla Public Suffix List (PSL)**[10]. The PSL is a community-maintained catalog of domain suffixes under which Internet users can directly register their own independent names[11]. Browsers and cloud vendors use the PSL to determine cookie security boundaries, wildcard SSL certificate scoping, and what qualifies as a registrable "root domain"[10].

DNS Delegation Topologies for Free Subdomains

As shown in the routing topologies above, free subdomains operate under three distinct technical regimes:

1. **PSL-Listed Nameserver Delegation (Model A):** Providers such as DigitalPlat (*.dpdns.org, *.us.kg, *.qzz.io, *.xx.kg, *.qd.je), EU.org (*.eu.org), NIC.UA (*.pp.ua), and Nom.za (*.nom.za) operate on a delegation-only model[5]. Because these suffixes are registered on the Mozilla Public Suffix List, Cloudflare, Vercel, and Netlify recognize yourproject.dpdns.org as an independent root domain[11]. You can replace the registry's default nameservers with Cloudflare nameservers (such as ada.ns.cloudflare.com), enabling full A, AAAA, CNAME, MX, and TXT record management, Universal SSL, and CDN proxying[9]. An important structural caveat applies to **ClouDNS** (*.cloudns.ch, *.cloudns.ph, *.cloudns.nz, etc.): while ClouDNS has added most of its free domains to the PSL, its free zones keep the Start of Authority (SOA) record pointed at ClouDNS rather than delegating cleanly at the parent level[11]. Consequently, using a ClouDNS free domain with Cloudflare requires a "two-way" configuration where apex records remain at ClouDNS and sub-records (such as www and _acme-challenge) are individually delegated via NS

records to Cloudflare[23].

2. **GitOps & API Record Provisioning (Model B):** Developer identity services like is-a.dev, thedev.id, js.org, and Open Domains (*.is-cool.dev, *.is-not-a.dev) retain control of the parent domain's authoritative nameservers (frequently on Cloudflare) but allow developers to inject individual DNS records into the parent zone via GitHub Pull Requests or CLI/MCP tools[2]. By editing a JSON file (such as subdomains.json) in a forked repository and merging a PR, you map yourname.thedev.id via a CNAME record directly to your-project.vercel.app or {username}.github.io, after which Vercel or GitHub automatically provisions an SSL certificate for your custom subdomain[15].
3. **Walled-Garden Hosting Lock-In (Model C):** Traditional free web hosts—including InfinityFree, Byet.host, ProFreeHost, AwardSpace, x10Hosting, and FreeWebHostingArea—bundle free subdomains exclusively for use on their own shared storage clusters[7]. On InfinityFree, for example, users cannot modify the base A records of a free subdomain like somesite.epizy.com, cannot point it to GitHub Pages, and cannot onboard it to Cloudflare's CDN[7]. Furthermore, InfinityFree disabled the creation of "sub-subdomains" (such as auth.metas.gt.tc or info.lemony10.000.pe) on new accounts because multi-level subdomains on shared suffixes can no longer be protected by their automated SSL certificates[36].

2. Cloud PaaS, Jamstack, Static & Modern App Hosting Subdomains

Modern cloud Platform-as-a-Service (PaaS), serverless edge networks, and static site hosts automatically assign a free, HTTPS-enabled subdomain to every deployed project or worker[2]. These suffixes are registered on the Mozilla Public Suffix List to guarantee cookie and origin isolation between tenant applications[27].

Provider / Platform	Exact Free Subdomain Format(s)	Hosting & Infrastructure Scope	Key Free Tier Quotas & Technical Notes
Cloudflare Pages	{project}.pages.dev[2]	Static sites & full-stack Jamstack (Pages Functions)	Generous free tier; must host on Cloudflare Pages; PSL-registered[2].
Cloudflare Workers	{worker}.workers.dev[2]	Serverless edge compute & dynamic web apps	Must host on Cloudflare Workers; supports dynamic routing and edge APIs[2].

Cloudflare Apps (PSL)	{app}.cloudflare.app[27]	Cloudflare app ecosystem	Registered under Cloudflare's PSL .app namespace[27].
GitHub Pages	{username}.github.io *.github.app[2]	Static HTML/CSS/JS & Jekyll sites from GitHub repos	1 GB storage, 100 GB/month bandwidth; supports custom CNAME attachment[38].
GitLab Pages	{username}.gitlab.io[4]	Static sites deployed via GitLab CI/CD pipelines	Unlimited public/private repos; 400 CI/CD mins/month for private repos[4].
Vercel	{project}.vercel.app {project}-{hash}-{user}.vercel.app[4]	Next.js, React, frontend frameworks & serverless functions	100 GB bandwidth, 100k function invocations; instant preview & production URLs[4].
Netlify	{sitename}.netlify.app[4]	Git-based Jamstack deploys & serverless functions	100 GB bandwidth, 300 build minutes/month; free custom domain attachment[4].
Google Firebase Hosting	{project}.web.app {project}.firebaseapp.com[4]	Static & dynamic web apps backed by Firebase Spark plan	10 GB storage, 10 GB/month bandwidth; includes Auth and Realtime DB on Spark tier[4].
Google Cloud Run / App Hosting	*.run.app *.mtls.run.app *.hosted.app[27]	Containerized serverless microservices & web apps	Registered on the Mozilla PSL under .app for isolated container endpoints[27].

Render	{service}.onrender.com[4]	Static sites, web services, and databases	Free static sites (3 static sites, unlimited bandwidth); dynamic services sleep on idle[4].
Fly.io	{appname}.fly.dev[4]	Global Docker/microVM app servers & PostgreSQL	3 GB storage, 160 GB bandwidth, shared-CPU VMs (2,340 hrs/mo), 10 active certs[4].
Surge.sh	{project}.surge.sh[4]	Static web publishing	Free static hosting subdomain (*.surge.sh)[4].
Replit	{app}.replit.app *.id.replit.app *.repl.co (legacy)[2]	Browser-based collaborative AI IDE & app hosting	Must host using Replit; .replit.app and .id.replit.app are PSL-listed[2].
Harvis.dev	{slug}.harvis.page[2]	CLI static site hosting (npx harvis)	Must host using harvis.dev; every site automatically gets a slug.harvis.page address[2].
Deed.page	{your-slug}.deed.page[14]	Instant static HTML / folder hosting	Free subdomain with static hosting; zero signup required (f-o-x11/deed-page-skill)[14].
Puter	{app}.puter.app[27]	Open-source browser "Internet OS" & serverless workers	Free hosting + live URL on a free subdomain; user-pays AI/cloud model via Puter.js[27].

Heroku	{app}.herokuapp.com[4]	PaaS application hosting	Classic PaaS subdomain format (*.herokuapp.com)[4].
Railway	{service}.up.railway.app[27]	Cloud infrastructure & container deployment	PSL-registered under up.railway.app[27].
DigitalOcean App Platform	{app}.ondigitalocean.app[27]	Managed PaaS for static and dynamic apps	PSL-registered under ondigitalocean.app[27].
Streamlit Community Cloud	{app}.streamlit.app[27]	Python data science & machine learning web apps	PSL-registered under streamlit.app[27].
CodeSandbox	{id}.csb.app {id}.preview.csb.app[27]	Cloud development environments & live previews	PSL-registered under csb.app and preview.csb.app[27].
CodePen	{pen}.codepen.app[27]	Frontend code sandbox & live app previews	PSL-registered under codepen.app[27].
Expo	{app}.expo.app *.on.expo.app *.staging.expo.app[27]	Universal web/mobile deployments	Includes on.staging.expo.app; all registered on the Mozilla PSL[27].
Convex	{deployment}.convex.app[27]	Reactive backend-as-a-service & database	PSL-registered under convex.app[27].
Fleek	{site}.on-fleek.app[27]	Edge & decentralized web	PSL-registered under on-fleek.app[27].

		hosting	
Fastly Compute	{service}.edgecompute.app[27]	Serverless edge compute platform	PSL-registered under edgecompute.app[27].
Encore	{app}.encr.app {app}.frontend.encr.app[27]	Distributed backend & frontend cloud	PSL-registered under encr.app[27].
Northflank	*.northflank.app[27]	Developer cloud platform	PSL-registered under *.northflank.app[27].
Upsun	*.upsun.app[27]	Cloud application PaaS	PSL-registered under *.upsun.app[27].
Hack Club	{project}.hackclub.app[27]	Student developer club hosting infrastructure	PSL-registered under hackclub.app[27].
Additional PSL .app / .ai Cloud Platforms	*.aiven.app, *.beget.app, *.brave.app (*.s.brave.app), *.claude.app, *.clerk.app (*.clerkstage.app), *.corespeed.app, *.developer.app, *.e2b.app, *.easypanel.app, *.relay.evervault.app, *.gadget.app, *.hasura.app, *.kiloapps.ai, *.mocha.app, *.noop.app,	Specialized SaaS, AI sandboxes, BaaS, and cloud app runtimes	All listed suffixes are active public suffixes on the Mozilla PSL (publicsuffix.org) isolating tenant sub-applications[27].

	*.nyat.app, *.pplx.app, *.retool.app, *.rocketpreview.app, *.snowflake.app (*.privatelink.snowflake.app), *.spawnbase.app, *.sprites.app, *.wnext.app[27]		
Regional & Enterprise Cloud Suffixes (PSL)	*.mel.cloudlets.com.au, *.cafjs.com, *.mycd.eu (Callidomus), *.forgeblocks.com, *.id.forgerock.io, *.cloud.int.apple (*.r.cloud.int.apple and regional sub-zones)[27]	Regional cloudlets, IoT hubs, and enterprise cloud endpoints	Registered on the Mozilla PSL for tenant subdomain isolation[27].

Important Note on Glitch (*.glitch.me)

For nearly a decade, **Glitch** provided free Node.js and static web hosting under {project-slug}.glitch.me (alongside CDN domains cdn.glitch.global, cdn.glitch.me, and cdn.hyperdev.com)[20]. Following an official announcement on May 22, 2025, **Glitch permanently shut down all project hosting and user profiles on July 8, 2025**, citing the high cost of operating millions of dynamic applications and defending against abuse[20]. Project code downloads remained open until December 31, 2025, and pre-configured URL redirects for legacy *.glitch.me subdomains are scheduled to remain operational at least through the end of 2026[21]. Developers seeking direct replacements for Glitch's instant in-browser workflow have migrated to **Puter** (*.puter.app), **Replit** (*.replit.app), **Instantsite.dev**, **Vercel**, and **Cloudflare Workers**[39].

3. Traditional Free Shared Web Hosting (LAMP, cPanel, VistaPanel & DirectAdmin)

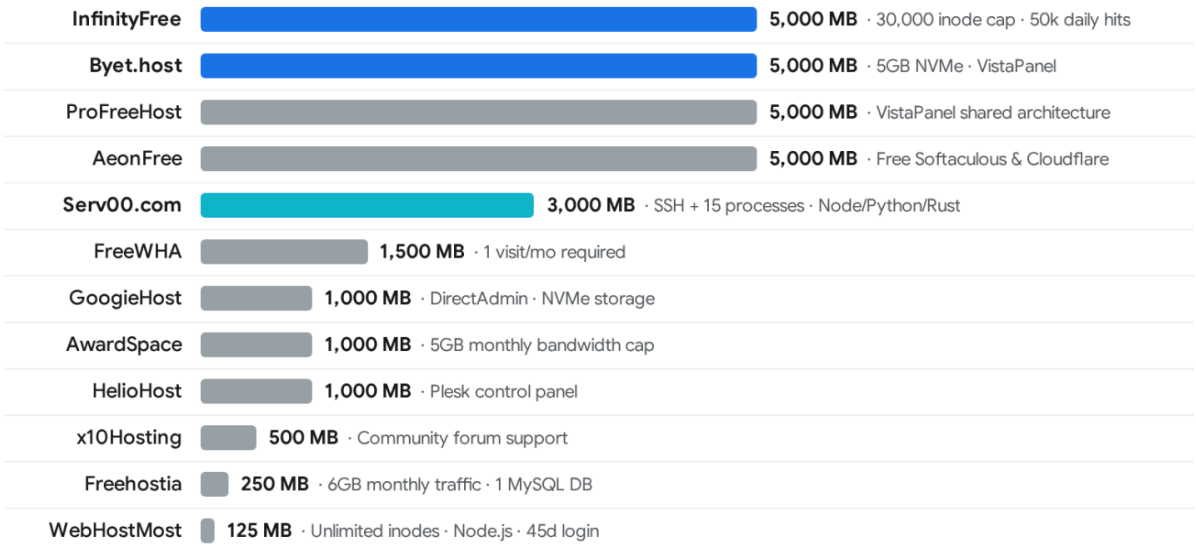

Traditional free shared hosts provide persistent Linux hosting (typically running Apache or LiteSpeed, PHP 8.x, and MySQL/MariaDB) paired with a control panel (VistaPanel, DirectAdmin, Plesk, or custom panels) and a pool of proprietary subdomain extensions[6]. Unlike Jamstack platforms, these providers let you run WordPress, Joomla, or custom PHP/MySQL scripts at zero cost, though they lock their free subdomains strictly to their own hosting servers[7].

InfinityFree and Byet.host Lead in Both **Free Storage** and **Subdomain Variety**

Storage & Subdomain Leaders (InfinityFree, Byet.host) · Developer-Centric Stack (Serv00.com) · Other Active Shared Hosts

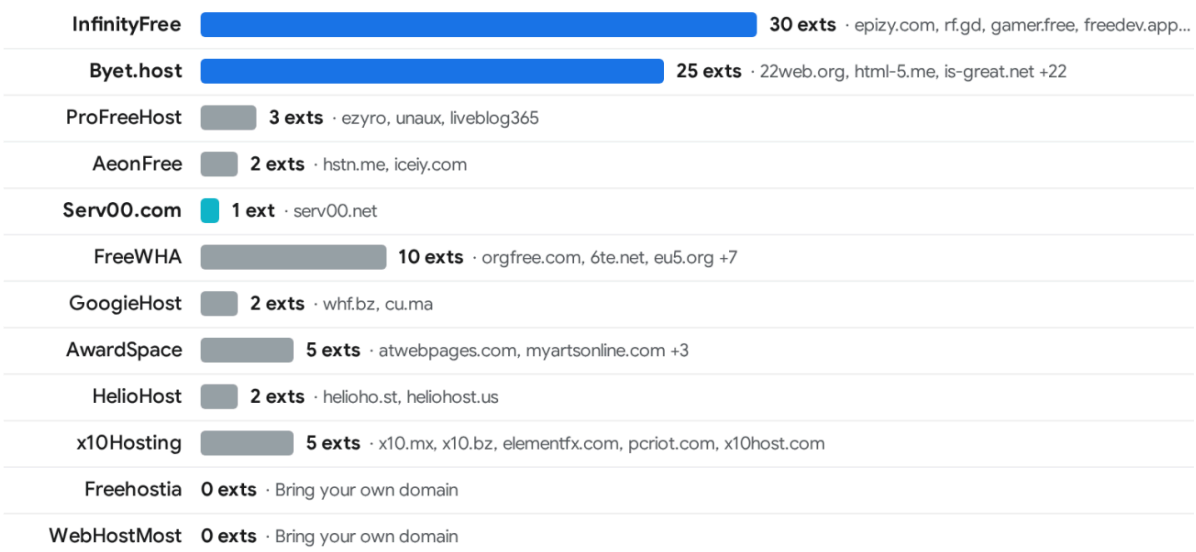

PANEL 1: FREE DISK STORAGE ALLOCATION (MB)

Scale: 0 to 5,000 MB • Annotated with operational limits

PANEL 2: FREE SUBDOMAIN EXTENSIONS AVAILABLE AT SIGNUP

Scale: 0 to 30 extensions • Annotated with domain examples

Quantitative comparison of active free shared hosting providers in 2026. While **InfinityFree**, **Byet.host**, **ProFreeHost**, and **AeonFree** all share the 5,000 MB iFastNet/VistaPanel architecture, **Serv00.com** (3,000 MB) and **WebHostMost** (125 MB) differentiate via SSH, Node.js, Python, and unlimited inode or multi-database support.

The iFastNet / MyOwnFreeHost (MOFH) Ecosystem

Several of the largest free hosting providers—**InfinityFree**, **Byet.host**, **ProFreeHost**, **AeonFree**, and boutique resellers like **Celestine** and **ALCHosting**—operate on the clustered **MyOwnFreeHost (MOFH) / VistaPanel** infrastructure maintained by iFastNet[3]. While they share similar core specifications (5 GB disk space, unlimited bandwidth, PHP 8.2–8.4, up to 400 MySQL/MariaDB databases, Softaculous auto-installer, no forced ads, and a 10 MB single-file upload limit), each provider maintains its own distinct pool of free subdomain extensions[6]. **InfinityFree** advertises "25+ extensions" on its homepage[49], with 30 specific subdomain suffixes documented across its support forums and publisher domain registries following an 11-domain expansion announced on May 30, 2026[1]. Hosting reviews note that InfinityFree enforces a 30,000 inode limit and a 50,000 daily hit limit (which temporarily suspends an account for 24 hours if exceeded)[18]. **Byet.host** advertises 24 extensions in hosting comparisons[6], with 25 specific suffixes (plus 2 reseller-specific extensions on Celestine) documented across its signup lists and reseller panels[3].

MOFH Provider	Category / Vintage	Complete List of Free Subdomain Formats
InfinityFree	Established & Legacy Pool (19 suffixes)	{yoursite}.rf.gd, {yoursite}.epizy.com, {yoursite}.great-site.net, {yoursite}.infinityfreeapp.com, {yoursite}.lovestoblog.com, {yoursite}.42web.io, {yoursite}.000.pe, {yoursite}.free.nf, {yoursite}.wuaze.com, {yoursite}.kesug.com, {yoursite}.infy.uk, {yoursite}.ct.ws, {yoursite}.gt.tc, {yoursite}.gamer.gd, {yoursite}.page.gd, {yoursite}.xo.je, {yoursite}.infinityfree.me, {yoursite}.fwh.is, {yoursite}.freecluster.eu *(older accounts only)*[4]

InfinityFree	May 30, 2026 Expansion Batch (11 suffixes)	{yoursite}.gamer.free *(gaming/esports)*, {yoursite}.freedev.app *(developers)*, {yoursite}.freehosting.dev *(developers)*, {yoursite}.howto.rocks *(tutorials/DIY)*, {yoursite}.free.je, {yoursite}.site.je, {yoursite}.freepage.cc, {yoursite}.infinityfree.io, {yoursite}.ifree.page, {yoursite}.infy.click, {yoursite}.nfy.fyi[1]
Byet.host *(and MOFH resellers ALCHosting & Celestine)*	General, Tech & Performance (12 suffixes)	{you}.10001mb.com, {you}.22web.org, {you}.2kool4u.net, {you}.66ghz.com, {you}.a0001.net *(or a001.net)*, {you}.fast-page.org *(or fast-page.net)*, {you}.html-5.me *(or htm5.me)*, {you}.is-best.net, {you}.is-great.net, {you}.is-great.org, {you}.totalh.net, {you}.web1337.net[3]
Byet.host *(and MOFH resellers ALCHosting & Celestine)*	Community, Blogging, Business & Lifestyle (13 suffixes)	{you}.fanclub.rocks, {you}.humorme.info, {you}.iblogger.org, {you}.joomla-host.org, {you}.likesyou.org, {you}.loveslife.biz, {you}.my-board.org, {you}.my-style.in, {you}.mydiscussion.net, {you}.nichesite.org, {you}.social-networking.me,

		{you}.synergize.co, {you}.talk4fun.net[3]
Celestine *(MOFH Reseller)*	Reseller-Specific Suffixes (2 suffixes)	{yoursite}.celestine.indevs.in *(active)*, {yoursite}.iona-web.indevs.in *(discontinued for new accounts, active for existing sites)*[3]
ProFreeHost	Primary Subdomain Pool (3 suffixes)	{yoursite}.ezyro.com, {yoursite}.unaux.com, {yoursite}.liveblog365.com[45]
AeonFree	Primary Subdomain Pool (2 suffixes)	{yourname}.hstn.me, {freewebsite}.iceiy.com[54]

Independent Free Shared & Developer Hosting Providers

Beyond the iFastNet cluster, several independent hosts operate proprietary infrastructure with specialized capabilities:

Hosting Provider	Exact Free Subdomain Format(s)	Storage, Bandwidth & Stack Specs	Critical Operational Rules & Limits
Serv00.com *(and paid sibling hostUNO.com)*	{login}.serv00.net *({login}.useruno.com on paid hostUNO)*[4]	3 GB NVMe SSD, unlimited transfer, 512 MB RAM, 15 system processes, 3 TCP/UDP ports; PHP 5.6–8.5, Node.js, Python, Rust, Go, Ruby, Java, C/C++; 10 MySQL, 3 PostgreSQL, MongoDB; full SSH & Git/SVN[48].	Managed via DevilWEB panel and devil CLI command; EU servers; 7-day daily backups; forum support only[48].
Free Web Hosting Area (FreeWHA)	{yourname}.orgfree.com	1,500 MB (1.5 GB) web space,	Operating since 2005

	{yourname}.6te.net {yourname}.ueuo.com {yourname}.eu5.org {yourname}.noads.biz {yourname}.coolpage.biz {yourname}.freeoda.com {yourname}.freevar.com {yourname}.freetzi.com {yourname}.xp3.biz[25]	unmetered traffic, 12 MB file size limit, Apache 2.4, PHP 5.6–8.5, MariaDB 10.4, phpMyAdmin, FTP[25].	(freewha.com); no ads for new/low-traffic sites; **site must receive at least 1 real visit per month** or the account is deleted[25].
AwardSpace	{yoursite}.atwebpages.com {yoursite}.medianewsonline.com {yoursite}.myartsonline.com {yoursite}.mywebcommunity.org {yoursite}.onlinewebshop.net[33]	1 GB disk space, 5 GB monthly bandwidth, 1 MySQL database, PHP/MySQL, Zacky App Installer, 24/7 support, 100% ad-free[6].	Allows hosting 1 custom domain + up to 3 free subdomains; subdomains take 1–2 hours to become active after registration[6].

x10Hosting	{yoursite}.x10.mx {yoursite}.x10.bz *(or .x10.biz)* {yoursite}.x10host.com {yoursite}.pcriot.com {yoursite}.elementfx.com {yoursite}.exofire.net *(legacy)*[35]	500 MB disk space, 10 GB/month bandwidth, DirectAdmin/cPanel, PHP, MySQL, no forced ads[24].	Up to 3 subdomains; main free subdomain acts as account identifier and requires staff assistance to change; strict inactivity login rules[24].
GoogieHost	{yourname}.whf.bz {yourname}.cu.ma[6]	1,000 MB (1 GB) NVMe storage, unmetered bandwidth, DirectAdmin control panel, automatic free SSL, one-click installer[6].	Full DNS management (A, AAAA, CNAME, MX, TXT) inside DirectAdmin; live within minutes of signup[6].
HelioHost	{yourname}.helioho.st {yourname}.helioho st.us {yourname}.helioho st.org *(staff/legacy only)*[73]	1,000 MB storage (500 MB on older plans), unlimited bandwidth, Plesk control panel, PHP, Python, Ruby, Perl, ASP.NET, PostgreSQL & MySQL[38].	Non-profit free host; daily signup cap (200/day); .heliohost.org was retired for new public users a couple of years ago[38].
Alwaysdata	{account}.alwaysdata.net *(plus {service}-[account].alwaysdata.net for*	100 MB storage, unlimited bandwidth, SSH access, multiple databases (MySQL, PostgreSQL,	Covered by default *.alwaysdata.net Let's Encrypt wildcard SSL (64-character address limit for

	mysql-, postgresql-, rabbitmq-, ssh-, ftp-, imap-, pop-, smtp-, webdav-, caldav-, carddav-, services-)[75]	RabbitMQ, Redis, Memcached)[38].	cert generation)[76].
Free.fr	{username}.free.fr[4]	Legacy French ISP personal web pages	Historical European free subdomain format[4].
WebHostMost	*Custom domain + up to 5 subdomains via DirectAdmin (no proprietary free suffix specified on plan page)*[18]	125 MB NVMe SSD, LiteSpeed Enterprise, AMD EPYC, **unlimited inodes**, PHP 4.4–8.3, **Node.js**, Python, 1 MySQL/PostgreSQL DB, DDoS protection[18].	Must log into the Client Area at least once every 45 days (or monthly) to keep the free account active; SMTP disabled on free tier[18].
Freehostia	*None (Watercircle free plan hosts up to 5 custom domains you already own)*[6]	250 MB storage, 6 GB monthly bandwidth, 1 MySQL DB (10 MB), 3 email accounts[6].	Explicitly does not list a free subdomain on its plan page; designed to host custom domains you already own[6].
Historical / Legacy Shared Hosts	**000webhost** *(Closed 2024)*: *.000webhostapp.com, *.comoj.com[4] **1FreeHosting**: *.juplo.com[80] **2FreeHosting**: *.3eeweb.com,	Various legacy LAMP configurations	**000webhost** and **Hostinger Free** were discontinued in 2024 according to WebHostMost's industry review[18]. Many early-2010s hosts (1freehosting, 2freehosting, serversfree, hobby.ru) are

	*.yzi.me, *.twomini.com, *.ciki.me, *.freeserver.me[80] **FreeHostingNoAds**: *.t15.org[80] **ServersFree**: *.bugs3.com[80] **Biz.nf**: *.co.nf[80] **Host-ed**: *.host-ed.net, *.host-ed.me[58] **0000free**: *.0000free.com, *.0sites.org, *.0sites.net[72] **20m**: *.20m.com[59] **Freeservers**: *.freeservers.com, *.8m.net[59] **Hobby.ru**: *.hobby.ru[59]		legacy or archival[59].

4. Free Domain Registries, Pseudo-TLDs & Full NS Delegation Providers

If you want a free domain that behaves like a registered root domain—allowing you to point nameservers (NS) to Cloudflare, configure custom email (MX/SPF/DKIM), or bind the apex to any VPS or PaaS—you must use a **free domain registry or PSL-listed pseudo-TLD**[9]. Following the demise of Freenom (.tk, .ml, .ga, .cf, .gq), open-source foundations and regional registries provide this layer[19].

Registry / Provider	Exact Free Domain Suffix(es) Offered	DNS & Nameserver Capabilities	Verification, Quotas & Operational Caveats
DigitalPlat FreeDomain (domain.digitalplat.org / DigitalPlatDev/Free Domain)	{name}.dpdns.org {name}.us.kg {name}.qzz.io {name}.xx.kg {name}.qd.je[5]	**Full NS Delegation** (Cloudflare, deSEC, FreeDNS, Hostry, Vercel, Netlify, or self-hosted NS). Registered on Mozilla PSL[9].	Backed by a US 501(c)(3) nonprofit (The Hack Foundation / DigitalPlat Foundation), with community articles reporting 200,000+ to 500,000+ registered domains[5]. Default limit of 1 domain per user account; .us.kg requires KYC and annual renewal[2]. *Note: Official Telegram was compromised; use official dashboard and Discord only*[5].
EU.org (nic.eu.org)	{name}.eu.org {name}.nl.eu.org *(and country third-level variants)*[28]	**Full NS Delegation** (supports Cloudflare onboarding). PSL-listed[28].	Operating since 1996 for individuals and non-commercial orgs[14]. Requests historically took ~14 days for approval, though community forum posts report that manual review has been stalled since 2023[28].
NIC.UA (nic.ua)	{name}.pp.ua[28]	**Full NS / A / AAAA**	Ukrainian free

		/ CNAME Delegation (supports Cloudflare). PSL-listed[28].	third-level domain operating for 10+ years; community guides note it requires binding a payment card for verification during signup[28].
Nom.za (secure.nom.za)	{name}.nom.za[11]	**Full NS Delegation** (supports Cloudflare). PSL-listed[11].	Official South African free personal second-level domain namespace[11].
Public Free Suffix (PublicFreeSuffix/PublicFreeSuffix)	{name}.is-a.si {name}.pfsdns.org {name}.nastu.net {name}.tun.re {name}.no.kg {name}.so.kg[14]	Full DNS management via web console, REST API, and **MCP server support for LLM agents**[14].	Non-profit free subdomain registry designed for personal sites, open-source projects, and AI applications[14].
DNSHE (www.dnshe.com / dnshe/DNSHE-Free Domains)	{name}.us.ci {name}.cc.cd {name}.de5.net {name}.ccwu.cc[14]	Anycast DNS and REST API management[14].	Stable free subdomains for developers; enforces a 180-day renewal window[14].
Stackryze (domain.stackryze.com / stackryze/FreeDomains)	{name}.indevs.in {name}.sryze.cc {name}.ryzedns.org	Full DNS management via Stackryze dashboard[14].	Active multi-extension free domain platform for developers[14].

	{name}.nx.kg[14]		
ClouDNS (cloudns.net / cloudns.ch)	{name}.cloudns.asia {name}.cloudns.be {name}.cloudns.biz {name}.cloudns.cc {name}.cloudns.ch {name}.cloudns.cl {name}.cloudns.club {name}.cloudns.cx {name}.cloudns.eu {name}.cloudns.in {name}.cloudns.info {name}.cloudns.nz {name}.cloudns.org {name}.cloudns.ph {name}.cloudns.pro {name}.cloudns.pw {name}.cloudns.us {name}.cloudns.com *(not on PSL)* {name}.cloud-ip.biz	1 Free DNS Zone, 4 Unicast DNS servers, 50 DNS records, 500,000 queries/month, 1 mail forward, Dynamic DNS, and Web redirects[89].	1 free domain per account; ClouDNS rotates which suffix is offered to new signups[30]. Most suffixes are on the PSL, but because SOA remains at ClouDNS, binding to Cloudflare requires two-way NS record delegation for www and _acme-challenge[23]. Accounts without an active website or from flagged IP ranges may face restrictions[90].

	{name}.cloud-ip.cc *(PSL Oct 2025)* {name}.abrdns.com *(PSL Oct 2025)* {name}.dnsabr.com {name}.ddns-ip.net {name}.ip-ddns.com {name}.ip-dynamic.org {name}.dns-dynamic.net[10]		
PublicZone.org	{name}.nyc.mn {name}.cn.st[2]	Full Mozilla PSL support[2].	Funded via charitable donations and the GitHub Developers Program; **requires operating a GitHub repository with 100+ stars**[2].
OpenHost	{name}.prvcy.page {name}.16-b.it {name}.32-b.it {name}.64-b.it {name}.pride.moe {name}.pride.ngo[2]	Full Mozilla PSL support across all suffixes[2].	Open-source free subdomain service with retro computing (16-b.it, 32-b.it, 64-b.it) and privacy/community themes[2].
ING.NG	{name}.ing.ng[2]	Full DNS (A, AAAA, CNAME, MX, TXT,	Claimable instantly from the CLI (npx

		NS, SRV)[2].	ingng), REST API, or web dashboard; zero renewal fees[2].
AgentDomains (tashfeenahmed/AgentDomains)	{name}.agentdomains.co {name}.makes.fyi[2]	Full DNS (A, AAAA, CNAME, TXT, NS), auto-HTTPS proxy, and URL forwarding[2].	Claimed via CLI or MCP server with email confirmation; **10 domain names free** per account (optional $5/mo Pro plan for 100 names)[2].
EU.CC (GNDevProd/FreeDomain)	{name}.eu.cc[14]	Free domain registration and DNS management[14].	Open to developers, startups, students, and businesses[14].
FreeDNS.my (KevinWhite-387/freedns-my)	{name}.freedns.my[14]	Free second-level domain DNS	Requires human review at signup; no fees and no expiration[14].
Lovie.me	{name}.lovie.me[14]	Authoritative Anycast DNS control[14].	Free subdomain service with full Anycast DNS management[14].
Go-Live.me (shanmukhasaireddy13/Go-Live)	{name}.go-live.me[14]	Instant Anycast subdomain & custom domain service[14].	Open-source Anycast subdomain registry[14].
Additional Niche & Regional Registries	**Freedomain.one**: *.publicvm.com, *.run.place *(+3 others)*[28] **L53.net**: *.onflashdrive.app *(21-year promo via code open3k2y /*	Varies from full NS delegation (L53.net) to local panel / CNAME SaaS routing (Azote.org, Freedomain.one)[28].	**Student-Only Note:** Verified students with an .edu email or student ID can also claim 1-year free top-level domains via the **GitHub Student Developer**

	newuser, CF-compatible)[28] **Azote.org**: Multiple French free subdomains *(compatible with Afraid.org / CF SaaS)*[28] **Subreg.cz**: *.free.hr *(now charges ~1.6 RMB/yr)*[28] **Chinese Public Welfare Domain Home (公益域名之家)**: *.xiaofeng.fun, *.xiaofengcloud.xyz, *.fdns.fun, *.likeyfkj.icu, *.271378.xyz, *.jddns.icu, *.免费域名.xyz *(cannot be added to CF)*[87]		**Pack** from **Namecheap** (.me, .tech) and **Name.com** (.live, .studio, .games, .software, up to 10 domains), though these expire after 12 months unlike permanent subdomains[14].

5. Developer Identity, Open-Source & GitOps (GitHub PR) Subdomains

A widespread model within the open-source community is the **GitOps subdomain registry**[2]. Spearheaded by js.org (founded in 2015) and popularized for general developer portfolios by is-a.dev and thedev.id, these services store their DNS zone configurations as JSON or JS files inside a public GitHub repository[15]. To claim a permanent, ad-free subdomain, you fork the repository, add a file or entry mapping your chosen prefix to your GitHub Pages, Vercel, or Netlify deployment, and open a Pull Request[15]. Once merged by maintainers, automated workflows sync the change to the parent DNS zone, activating HTTPS within hours[15].

Active GitOps & Developer Identity Subdomain Registries (✅)

The table below catalogs every active developer subdomain service verified across open-source registries in 2026[2]:

Service / Registry Name	Exact Subdomain Format(s)	Supported DNS Records & Mechanism	Specific Eligibility Requirements & Repository
is-a.dev	{yourname}.is-a.dev [14]	GitHub PR (is-a-dev/register)[14]	General developer portfolios and projects; flagship developer identity registry[14].
js.org	{project}.js.org[14]	GitHub PR (js-org/js.org); CNAME to GitHub Pages or 3rd-party hosts[86]	**Strictly JavaScript projects/libraries** with a clear connection to JS; personal blogs without JS focus are no longer accepted[86].
thedev.id	{yourname}.thedev.id[15]	GitHub PR (thedev-id/thedev.id); edits subdomains.json for CNAME[15]	Open to all developers; explicitly supports GitHub Pages, Vercel, and Netlify[15].
thedev.me	{name}.thedev.me[14]	GitHub PR (thedev-me/register)[14]	Open to all developers; no special restrictions[14].
Open Domains	{name}.is-cool.dev {name}.is-a-fullstack.dev {name}.is-local.org {name}.is-not-a.dev {name}.localplayer.dev	GitHub PR (open-domains/register)[14]	Free subdomains for personal sites, open-source projects, and local development[14].

	{name}.open-domains.net[2]		
Is-Cool-Me	{name}.is-pro.dev {name}.is-into.tech[14]	GitHub PR (is-cool-me/register)[14]	Personal websites, tech projects, and open-source portfolios[14].
is-a-good.dev	{name}.is-a-good.dev[14]	GitHub PR (is-a-good-dev/register)[14]	Open to developers for personal sites and projects[14].
is-an.app & 1bt.uk	{name}.is-an.app {name}.1bt.uk[86]	GitHub PR (tarampampam/free-domains); supports wildcards, A, AAAA, CNAME, NS, TXT[17]	For developer applications, personal sites, and projects[17].
cluster.ws & wip.la	{name}.cluster.ws {name}.wip.la[2]	GitHub PR (Olivr/free-domain)[17]	Designed for IT enthusiasts and developers needing project/work-in-progress domains[17].
is-a.software	{name}.is-a.software[14]	**Web UI Dashboard** + GitHub (is-a-software/is-a-software)[14]	Instant setup with an actual UI dashboard to manage DNS without waiting on a Pull Request[14].
cli.rs	{yourproject}.cli.rs[2]	GitHub PR (zackify/cli.rs)[14]	**Rust projects only**[2].
mod.land	{project}.mod.land[2]	GitHub PR[2]	**Deno-related projects only**[2].
js.cool	{project}.js.cool[14]	GitHub PR (willin/domain / willin/js.cool)[14]	Exclusively for **Chinese open-source JavaScript**

			projects (supports GitHub Pages & Vercel)[14].
vexr.dev	{name}.vexr.dev {name}.is-local.host[14]	Custom DNS management & Cloudflare proxy support (nerkoux/vexr.dev)[14]	Developer-first subdomains offering both .vexr.dev and .is-local.host[14].
fluxcast.dev	{name}.fluxcast.dev[2]	GitOps PR (IlyaP358/fluxcast-domains)[2]	Free GitOps subdomain registry for developers[2].
pntr.dev	{yourname}.pntr.dev[14]	Instant CLI / Web (oddunits/pntr-cli)[14]	**Zero sign-up required**; points anywhere, receives email, and captures HTTP requests for debugging[14].
dee.al	{name}.dee.al {name}.gal.aw {name}.devz.id[2]	Instant domain / GitOps registry[17]	Free developer and blog subdomains across three short extensions[17].
env.pm	{name}.env.pm {name}.jsx.pm[2]	Developer registry[14]	Free subdomains for projects or personal use under .env.pm and .jsx.pm[14].
part-of.my.id	{name}.part-of.my.id {name}.is-my.id[14]	GitHub PR (partofmyid/register)[14]	Personal identity subdomains under Indonesian .my.id[14].
creepers.sbs	{name}.creepers.sbs {name}.creepers.clo	GitHub PR (creepersbs/register)[14]	Completely free subdomains across .creepers.sbs and .creepers.cloud[14].

	ud[14]		
is-a.bot	{name}.is-a.bot[14]	GitHub PR (free-domains/is-a.bot)[14]	Free subdomain for bots and developer projects[14].
is-not.cool	{name}.is-not.cool[14]	GitHub PR (is-not-cool/registration)[14]	Open to all developers[14].
is-really.cool	{name}.is-really.cool[17]	GitHub PR (is-really-cool/register)[17]	Software developer projects and personal sites[17].
is-cod.in	{name}.is-cod.in[14]	GitHub PR (is-cod-in/register)[14]	Developer portfolio domain hack ("is coding")[14].
is-a.co	{name}.is-a.co[17]	GitHub PR (PythonicBoat/is-a.co)[17]	General free subdomain registry[17].
is-a.ru	{name}.is-a.ru[14]	Web application form[14]	Free subdomains for developers via application form[14].
is-my.app	{name}.is-my.app[14]	GitHub PR (jn-aman/is-my.app)[14]	Free app showcase subdomain[14].
is-a.stupid.cat	{name}.is-a.stupid.cat[14]	GitHub PR (is-a-stupid-cat/register)[14]	Novelty/personal developer subdomain[14].
isroot.in	{name}.isroot.in[14]	GitHub PR (nevercode-in/Free Domains)[14]	Open-source subdomain service to launch APIs, demos, and side projects[14].
runs-on.dev & runs-on.tech	{name}.runs-on.dev	GitHub PR (zordhalo/runs-on.d	Powered by Cloudflare and

	{name}.runs-on.tech[14]	ev & luke2m/runs-on.tech)[14]	.TECH Domains for project showcases[14].
jsid.dev	{name}.jsid.dev[2]	GitHub PR (namdevel/jsid.dev)[17]	Web identity for developers[17].
developer.li	{name}.developer.li[2]	Developer registry[2]	Short .li subdomain for developers[2].
rweb.site	{name}.rweb.site[14]	GitHub PR (katorlys/rweb.site)[14]	Personal websites and open-source projects[14].
foo.ng	{name}.foo.ng[14]	GitHub PR (Pokymon/foo.ng)[14]	Free subdomains for everyone[14].
ill.my.id	{name}.ill.my.id[14]	GitHub PR (w3teal/ill.my.id)[14]	Tiny, memorable subdomain service by w3teal[14].
iz.rs	{name}.iz.rs[14]	Web/GitOps registry[14]	Short Serbian .rs subdomain for everyone[14].
devs.surf	{name}.devs.surf[14]	GitHub PR (ByteLogicLabs/Free-Domains)[14]	Free subdomain for everyone[14].
getxyz.de	{name}.getxyz.de[14]	GitHub PR (blackredit/register)[14]	Free German .de subdomains for developers[14].
moe.page	{name}.moe.page[14]	Automated GitOps (zknmoe/moe.page-subdomains)[14]	Open, automated subdomain distribution for blogs, homepages, and personal projects[14].
int.yt (Intent)	{name}.int.yt[14]	GitHub PR	Short, permanent

		(intentfreedomain/FreeDomain)[14]	subdomains for developers and creators[14].
id.thatako.net	{name}.id.thatako.net[14]	GitHub PR (aitji/id.thatako.net)[14]	Free third-level domain registration[14].
awesomeprojects.tech	{name}.awesomeprojects.tech[14]	GitHub PR (So10-k/awesomeprojects.tech)[14]	Free subdomain for hosting developer projects[14].
mit-license.org	{name}.mit-license.org[14]	GitHub PR (remy/mit-license)[14]	Dedicated hosted MIT License page for your open-source projects[14].
nameforge.rf.gd	*Multiple community domains*[14]	GitHub PR (NameForge-Free-Domain/register)[14]	Community-driven subdomain registry[14].
Other Niche & Restricted Registries	{name}.dual.my[2] {name}.yeet.su[2] {name}.obl.ong[2] {name}.4k.pics[14] {name}.may-be.gay[17] {name}.ngo.us *(verified NGOs/nonprofits only, ngo-us/registry)*[2] {name}.iths.online *(students only,*	GitHub PR / Registry verification[2]	Check individual repository READMEs for demographic, student, NGO, or project-type verification rules[2].

	harinandsindukumar/free.iths.online)[14] {name}.dev-in.tw *(Taiwanese devs only, Dev-in-tw/dev-in.tw)*[14] {name}.from-mm.dev *(Myanmar devs only, thetmyoekhaing/from-mm.dev)*[14] {name}.vtxgames.co.uk *(game projects only)*[2] {name}.getlocalcert.net *(private network SSL use only)*[2]		

Currently Unavailable or Dormant GitOps Registries (❌)

Because community-run GitOps registries depend on individual maintainers renewing the underlying top-level domain each year, 14 historical repositories are currently marked unavailable (❌) in the harys722/free-domains tracking index[14]:

Dormant Subdomain Suffix	GitHub Repository	Historical Target Audience / Scope
{name}.is-amaz.ing	is-amazing/register	Software developer projects and personal sites[14].
{name}.withcoding.me	JastinXyz/withcoding.me	General developer subdomains[14].
{name}.stole-my.id	stole-my-id/registration	Subdomain service for fun

		or silly projects[14].
{name}.tilde.tk (~.tk)	youngchief-btw/tilde.tk	Subdomain acting as a UNIX home directory[14].
{name}.merahputih.moe	ScathachGrip/merahputih.moe	Free webspace/subdomain for anime/weeb developers[14].
{name}.addictedto.beer {name}.skillissue.gg	TinyBrickBoy/register	General community subdomains[14].
{name}.estin.pro	Kadacheahmedrami/estin.pro	Personal projects, portfolios, demos, and prototypes[14].
{name}.is-app.top	is-app-top/register	General project subdomains[14].
{name}.is-a.tech	isatechy/is-a.tech	Developer domains[14].
{name}.illust.bio	illust-bio/illust.bio	Exclusively for illustrators and illustration-related work[14].
{name}.twente.me	twente-me/twente.me	Exclusively for organizations, events, or places in the Twente region in Overijssel[14].
{name}.makesome.cool	1834423612/makesome.cool	Open-source projects[14].
{name}.singlebucks.live	MOHAMMADSHAIBAZQAISAR/get_free_domain	General free domain registry[14].

6. Dynamic DNS (DDNS) & Wildcard IP Resolution Subdomains

Originally built to let home lab operators, Raspberry Pi servers, and security cameras map dynamically changing residential IP addresses to a persistent hostname, **Dynamic DNS (DDNS)**

providers represent one of the largest and longest-running sources of free forever subdomains on the Internet[26]. Most modern DDNS providers support standard A, AAAA, CNAME, MX, and TXT records, meaning they can also be used for regular static websites, mail servers, and Let's Encrypt ACME challenges[14].

DDNS Provider	Complete List of Free Subdomain Formats	Free Tier Quotas, Record Support & Update Rules
DuckDNS (duckdns.org)	{subdomain}.duckdns.org[14]	**Up to 5 subdomains free** per account; hosted on AWS; zero ads, zero expiration, and no 30-day confirmation emails. Updated via a single HTTPS token URL or cron job; login via GitHub, Google, or Twitter[26].
deSEC (desec.io)	{subdomain}.dedyn.io[13]	Operated by a German privacy-focused non-profit (desec-io/desec-stack); provides **free DNSSEC-secured dynamic DNS subdomains** (*.dedyn.io) as well as free authoritative DNS hosting for custom domains[13].
Dynu Systems (dynu.com)	*Public Free Pool (17 suffixes):* {host}.dynu.com, {host}.ddnsfree.com, {host}.ddnsgeek.com, {host}.freeddns.org, {host}.giize.com, {host}.gleeze.com, {host}.accesscam.org, {host}.casacam.net, {host}.flashhub.net, {host}.loseyourip.com,	**Up to 4 free hostnames** per account; **accounts never expire** and require no 30-day confirmation clicks[26]. Supports 30-second minimum TTL, wildcard aliases, web redirects, and full DNS records (A, AAAA, CAA, CNAME, LOC, MX, PTR, SPF, TXT)[96].

	{host}.mytunnel.org, {host}.opik.net, {host}.remotewire.net, {host}.webredirect.org, {host}.kozow.com, {host}.ooguy.com, {host}.theworkpc.com[97] *Members / Corporate Only Pool (11 suffixes):* *.1cooldns.com, *.bumbleshrimp.com, *.ddnsguru.com, *.dynu.net, *.dynu.org, *.dynuddns.com, *.dynuddns.net, *.mysynology.net, *.roxa.org, *.tôt.net, *.yyuyy.com[98]	
FreeDNS (freedns.afraid.org)	*Flagship Public Domains:* {host}.mooo.com *(875,000+ hosts)* {host}.chickenkiller.com *(447,000+ hosts)* {host}.strangled.net *(118,000+ hosts)* {host}.crabdance.com *(105,000+ hosts)* {host}.ignorelist.com {host}.jumpingcrab.com {host}.twilightparadox.com {host}.mooo.info[87]	Community-driven shared registry where domain owners contribute zones for public sharing; supports multiple subdomains, no ads, full A, AAAA, CNAME, MX, and CAA record support, plus web forwarding and API automation[14]. Cannot be delegated to Cloudflare[87].

	*Plus 5,465 to 23,000+ community-shared domains (e.g., *.404.mn, *.baselinux.net, *.serverpit.com, *.ftp.sh, *.minecraft.pe, *.chrismac.org, *.crackedsidewalks.com, *.craftleds.com, *.craigkeen.com, *.my.qh.ie, *.n-et.org, *.nchez.mx, *.ndra.biz, *.ne-t.org, *.adsd.ro, etc.)*[14]	
No-IP (noip.com)	*Active Free Domains:* {host}.ddns.net, {host}.ddnsking.com, {host}.3utilities.com, {host}.bounceme.net, {host}.freedynamicdns.net, {host}.freedynamicdns.org, {host}.gotdns.ch, {host}.hopto.org, {host}.zapto.org, {host}.myddns.me, {host}.myftp.biz, {host}.myftp.org, {host}.myvnc.com, {host}.onthewifi.com, {host}.redirectme.net, {host}.servebeer.com, {host}.serveblog.net, {host}.servecounterstrike.com, {host}.serveexchange.com, {host}.serveftp.com, {host}.servegame.com, {host}.servehalflife.com, {host}.servehttp.com, {host}.serveirc.com,	Operating since 1999; integrated into most consumer routers[96]. Free tier is **limited to 1 hostname** and **requires manual account confirmation every 30 days** via email, or the hostname is removed[26]. *(Paid Enhanced tier adds domains like access.ly, blogsyte.com, brasilia.me, cable-modem.org)*[110].

	{host}.sytes.net, {host}.ditchyourip.com, {host}.dnsfor.me, {host}.dnsiskinky.com, {host}.dvrcam.info, {host}.hosthampster.com, {host}.ilovecollege.info, {host}.loginto.me, {host}.mlbfan.org, {host}.mmafan.biz, {host}.ufcfan.org, {host}.nflfan.org, {host}.nhlfan.net, {host}.collegefan.org, {host}.read-books.org, {host}.dvrhome.org *(80+ total shared domains)*[26] *Discontinued Branded & Affiliate Domains (Legacy only):* *.no-ip.org, *.no-ip.biz, *.no-ip.info, *.no-ip.net, *.no-ip.ca, *.no-ip.co.uk, *.noip.me, *.noip.us, *.mynetgear.com, *.dlinkddns.com[109]	
dynv6 (dynv6.com)	{zone}.dynv6.net {zone}.dns.army {zone}.dns.navy[14]	Free IPv4 and IPv6 dynamic DNS hostnames with full sub-record management and custom domain delegation[14].
YDNS (ydns.io)	{host}.ydns.eu[117]	European free Dynamic DNS provider supporting IPv4 and IPv6 updates[117].
FreeMyIP (freemyip.com)	{domain}.freemyip.com[14]	Instant free dynamic DNS; **requires no login and has no expiration**[14].

sslip.io	{ip-address-with-dashes}.sslip.io *(e.g., 2607-8700-5500-1de-8b6d-2a91-c34f-70e2.sslip.io)*[117]	Zero-configuration wildcard DNS service that automatically resolves any IPv4 or IPv6 address embedded in the hostname back to that IP address[117].
ChangeIP	{host}.changeip.com, {host}.changeip.co.uk, {host}.dynamicdns.co.uk, {host}.dynamicdns.me.uk, {host}.dynamicdns.org.uk, {host}.dyndns.pro[99]	Veteran DDNS provider offering free and paid dynamic hostnames[99].
DtDNS	{host}.dtdns.com, {host}.slyip.net, {host}.suroot.com[103]	Classic DDNS suffixes listed in public dynamic domain registries[103].
Sitelutions	{host}.kwikto.com, {host}.rr.nu *(+ others)*[28]	Free second/third-level DDNS domains that can be delegated to he.net (Hurricane Electric) or afraid.org[28].
German & European DDNS Pools	**Securepoint DynDNS** *(5 hosts, 10 domains free)*[95] **DDNSS.de / Home-Webserver Pools**: *.ddnss.de, *.ddnss.org, *.dyn.ddnss.de, *.dyndns.ddnss.de, *.dyn-ip24.de, *.home-webserver.de, *.dyn.home-webserver.de, *.myhome-server.de, *.dyndns1.de, *.dynvpn.de[91]	German dynamic DNS services widely used for self-hosted home servers[91].
Additional DDNS & Hardware Pools	dns4e.com, gslb.me, dnsdynamic.org, system-ns.com, dnsexit.com, nubem.com,	Various free and hardware-bundled DDNS services[113].

	ipnodns.ru, plus hardware-specific camera/DVR DDNS (dvrlists, easterndns, laview, swanndvr.net)[105] *(Note: Oracle/DYN *.dyndns.org, *.dyndns-free.com, *.homeftp.net, *.gotdns.org, *.is-a-techie.com, etc. are now strictly paid services)*[99].	

7. Localhost Tunneling & Reverse Proxy Subdomains

When exposing a local development server, webhook receiver, or self-hosted container directly to the public Internet without opening router ports, **localhost tunneling tools** generate public HTTPS URLs on dedicated subdomain suffixes[120]. While some assign ephemeral URLs that rotate on restart, others (like ngrok, Tailscale Funnel, and localtunnel) provide persistent or customizable free subdomains[120].

Tunneling Service	Exact Free Subdomain Format(s)	Persistence & Session Rules	Free Plan Quotas & Technical Restrictions
ngrok	{assigned-dev-domain}.ngrok-free.app *(*.ngrok.app also on PSL)*[27]	**Persistent** (assigned dev domain on the free plan; endpoints do not time out)[120].	1 GB data transfer/month, 20,000 HTTP requests/month, 5,000 TCP connections/month (TCP requires verified card), up to 3 online endpoints; displays an interstitial browser warning page to visitors[120].
Cloudflare Quick Tunnels	{random-words}.try	**Ephemeral** (assigns a new random	**No Cloudflare account required**;

(TryCloudflare)	cloudflare.com[120]	hostname on every cloudflared restart)[120].	free HTTPS tunnels; capped at 200 in-flight requests (returns HTTP 429 above limit); no Server-Sent Events (SSE) or SLA. *(Named Tunnels on Cloudflare's Free Plan allow permanent subdomains if you attach your own domain, with a 100 MB request body cap)*[120].
Tailscale Funnel	{node}.{tailnet-name}.ts.net[120]	**Persistent** (tied permanently to your tailnet identity)[120].	Included on Tailscale's Free **Personal Plan** (up to 6 users, unlimited user devices, 50 tagged resources, non-commercial use); listens strictly on ports 443, 8443, and 10000; no UDP support; median download speed ~7 Mbps[120].
localtunnel	{custom-or-random}.loca.lt[120]	**Customizable per session** (request any available prefix via --subdomain flag)[120].	100% free open-source npm tool with no paid tiers; no TCP/UDP support; shows an HTTP 511 warning page ("Tunnel website ahead!") requiring visitors to enter the host's public IP once every

			7 days[120].
LocalCan	{subdomain}.trylocalcan.com *(plus unlimited .local network domains)*[120]	**Session-capped** (up to 60-minute public sessions)[120].	1 active public URL at a time, 1 GB/month transfer, HTTPS only, routed strictly through New York edge; includes integrated MCP server for AI coding agents[120].
zrok	{share-token}.zrok.io[121]	Public or private shares on the free tier (reserved subdomains require Pro or self-hosting)[120].	Built on OpenZiti; **5 GB/day** data transfer limit, up to 25 environments, and 50 shares; unverified free accounts display a visitor warning page until a credit card is linked[120].
Pinggy (pinggy.io)	*Temporary public URLs (exact domain string not specified in documentation)*[121]	**60-minute session cap** per tunnel (can be restarted; persistent subdomains require Pro)[121].	**Unlimited bandwidth**; zero installation or account required for HTTP, TCP, and TLS tunnels via standard ssh; UDP requires Pinggy CLI; includes web debugger and QR code generator[121].
localhost.run	*Rotating temporary subdomain (exact domain string not specified in documentation)*[121]	**Rotates every few hours**[121].	Zero-install SSH tool (ssh -R 80:localhost:8080 localhost.run); connection speed is throttled as an anti-phishing

			control[121].
LocalXpose	*Random temporary subdomain (exact domain string not specified in documentation)*[120]	Ephemeral on free Starter tier (custom/reserved subdomains require paid plan)[121].	Free Starter tier limited to 2 HTTP(S) tunnels, session time limits, and an interstitial visitor page; includes built-in file server and basic auth[121].
Playit.gg	*Generic free agent/port endpoints (paid adds .playit.plus)*[121]	Persistent agent assignment[121].	Built for game servers (Minecraft, Valheim); free tier provides **4 ports total and 2 agents** with TCP and UDP forwarding[121].
InstaTunnel	*Supports custom subdomains on free tier (exact suffix not specified)*[121]	**24-hour sessions**[121].	3 concurrent tunnels, 2 GB monthly data cap, 2,000 requests/day, and basic analytics[121].
Telebit (PSL)	{subdomain}.telebit.app[27]	Persistent tunnel subdomain	Registered on the Mozilla PSL under telebit.app[27].
Tunnelto	{subdomain}.tunnelto.dev[121]	Reserved subdomains via hosted tunnelto.dev	Open-source Rust tunneling tool (currently noted as dormant)[121].
Localtonet & 21tunnel	*Managed tunnel endpoints (exact suffix not specified)*[121]	**Localtonet**: 30-min session timeout **21tunnel**: Free MVP[121]	**Localtonet**: 1 HTTP/TCP/UDP tunnel, 1 GB/month bandwidth. **21tunnel**: Built for AI coding agents; all

			features currently free in MVP stage[121].
PageKite	*Exact free subdomain format not specified in available documentation*[120]	**Not Free Forever** (31-day trial / 2.5 GB total transfer)[120].	Currently unable to process new paid subscriptions; maintainers recommend running pagekite.py as a self-hosted relay[120].

8. Website Builders, No-Code Platforms, IndieWeb & Tildeverse Communities

For users who do not need raw DNS records or Git deployment pipelines, no-code website builders, blogging networks, IndieWeb static communities, and public-access UNIX ("Tilde") servers provide permanent free web addresses bundled directly with their publishing tools[4].

Platform / Community	Exact Free Subdomain / URL Format(s)	Storage, Bandwidth & Publishing Model
Neocities	{sitename}.neocities.org[4]	**1 GB storage, 200 GB bandwidth**, zero ads ever; classic indie static HTML/CSS/JS web host[4].
Nekoweb	{sitename}.nekoweb.org[122]	IndieWeb static website hosting alternative to Neocities[122].
Carrd	{sitename}.carrd.co {sitename}.crd.co {sitename}.uwu.ai {sitename}.drr.ac {sitename}.ju.mp[4]	Up to **3 single-page responsive sites free** per account; all 5 suffixes are registered by Carrd on the Mozilla Public Suffix List[11].

Framer	{sitename}.framer.website {sitename}.framer.app {sitename}.framer.ai {sitename}.framer.media {sitename}.framer.photos {sitename}.framer.wiki {sitename}.framercanvas.com[4]	Visual web design and interactive prototyping builder; all 7 domain suffixes are registered by Framer on the Mozilla PSL[4].
Canva Websites	{sitename}.my.canva.site {sitename}.my.canvasite.cn *(*.canva-apps.com, *.canva-apps.cn for apps)*[4]	Free websites published directly from Canva; registered on the Mozilla PSL[4].
WordPress.com	{yoursite}.wordpress.com[4]	**1 GB storage, unlimited bandwidth**, free SSL, core blogging tools and templates[6].
Google Blogger / Blogspot	{blogname}.blogspot.com *(plus country ccTLD variants: .blogspot.co.uk, .blogspot.de, etc.)*[4]	Permanently free managed blogging platform[4].
Wix	{accountname}.wixsite.com/{siteaddress}[4]	**500 MB storage, 1 GB monthly bandwidth**, drag-and-drop builder and AI creation tools; displays Wix branding/ads on free tier[6].
Weebly	{yourname}.weebly.com[4]	**500 MB storage**, free SSL, drag-and-drop builder

		suited for simple static sites and small online stores[6].
Webflow	{sitename}.webflow.io[4]	Visual CSS/CMS builder publishing to *.webflow.io on the free tier[4].
Lovable	{project}.lovable.app[4]	AI-powered full-stack app builder (lovable.dev); free tier includes 3 projects and 2 GB storage[4].
Bubble	{appname}.bubbleapps.io[4]	Full-stack no-code web and mobile application platform with built-in database[4].
Softr	{appname}.softr.app[4]	No-code application builder (*.softr.app)[4].
FlutterFlow & Glideos (PSL)	{app}.flutterflow.app {app}.glideos.app[27]	Visual mobile/web app builders registered on the Mozilla PSL[27].
Durable	{sitename}.durable.co[4]	AI website builder free subdomain format[4].
Itch.io	{username}.itch.io[4]	Indie game and HTML5 web game hosting platform[4].
Substack, Medium & Tumblr	{pub}.substack.com {user}.medium.com {blog}.tumblr.com[4]	Newsletter and social blogging platforms offering free publication subdomains[4].
Minimalist & Developer Blogs	{blog}.bearblog.dev {blog}.mataroa.blog {blog}.hashnode.dev[122]	Lightweight blogging platforms[122].
Tildeverse / Public-Access	**tilde.club**: tilde.club	Volunteer-run shared UNIX

UNIX	(gemini://tilde.club/) **tilde.town**: tilde.town **tilde.team**: tilde.team (gemini://tilde.team/) **tilde.pink**: gemini://tilde.pink/ **envs.net**: envs.net (gemini://envs.net/) **breadpunk.club**: gemini://breadpunk.club/[123]	servers providing free web space and Gemini protocol (gemini://) capsules[123].
GNU Savannah	savannah.gnu.org savannah.nongnu.org[41]	Collaborative software development and hosting for free/open-source GNU and non-GNU projects[41].

9. Strategic Decision Matrix: Selecting the Right Free Subdomain

Because moving an established site off a free subdomain later forfeits accumulated search engine domain authority and breaks hardcoded links, choosing the right architectural tier on day one is essential[13]. Furthermore, commercial ad networks such as HellClick explicitly reject publisher sites hosted on free subdomains (*.rf.gd, *.epizy.com, *.vercel.app, *.github.io, *.is-a.dev, *.eu.org, *.ddns.net, etc.), requiring a registered top-level domain for ad network approval[4].

For non-commercial, developer, academic, or prototyping workloads, match your use case to the following optimal stack:

1. **Best for Full Cloudflare Control, Custom APIs & Multi-Service Routing:** Register a free domain on **DigitalPlat FreeDomain** ({name}.dpdns.org, {name}.us.kg, or {name}.qzz.io) or **NIC.UA** ({name}.pp.ua) and delegate its nameservers to **Cloudflare** or **deSEC**[5]. This gives you a PSL-recognized root zone with unlimited sub-subdomains (api.myproject.dpdns.org, staging.myproject.dpdns.org), free Cloudflare Universal SSL, CDN caching, and zero vendor lock-in[12].
2. **Best for Developer Portfolios, Open-Source Docs & Static Web Apps:** Host your frontend on **Cloudflare Pages** (*.pages.dev), **Vercel** (*.vercel.app), **Netlify** (*.netlify.app), or **GitHub Pages** (*.github.io), and attach a clean vanity identity from **is-a.dev** ({yourname}.is-a.dev), **thedev.id** ({yourname}.thedev.id), **is-a.software**

({yourname}.is-a.software), or **js.org** ({project}.js.org for JS libraries)[15].

3. **Best for Full-Stack Backend Runtimes (Node.js, Python, Rust, Go, SSH & Databases):** Sign up for **Serv00.com** ({login}.serv00.net) to get 3 GB SSD, SSH access, 15 background processes, and MySQL/PostgreSQL/MongoDB, or use **Fly.io** (*.fly.dev) / **Render** (*.onrender.com) for containerized deployments[4].
4. **Best for WordPress & PHP/MySQL Without Credit Cards:** Use **InfinityFree** (*.rf.gd, *.great-site.net, *.freehosting.dev, *.infinityfree.io) or **Byet.host** (*.22web.org, *.html-5.me, *.is-great.net) for 5 GB storage and 400 databases—keeping in mind InfinityFree's 30,000 inode cap (which a plugin-heavy WordPress install can quickly approach)—or use **WebHostMost** (125 MB storage, unlimited inodes, LiteSpeed Enterprise) paired with a free DigitalPlat domain[1].
5. **Best for Homelabs, Self-Hosted Servers & Localhost Webhooks:** Pair **DuckDNS** (*.duckdns.org), **deSEC** (*.dedyn.io), or **Dynu** (*.dynu.com, *.freeddns.org) with your router/server for dynamic IP tracking without 30-day confirmation emails, and use **Tailscale Funnel** (*.ts.net), **ngrok** (*.ngrok-free.app), or **Cloudflare Quick Tunnels** (*.trycloudflare.com) for instant HTTPS reverse-proxying[14].
